

Project Case Study

HDL®

Here we show you the third home automation project we got from our Brazilian partner in November.

It is a big villa located in the South of Sao Paulo. There were two main highlights in the project: the first was the coloured lights in the swimming pool and living room. With the help of HDL smart system, these lights are able to change with music to create many scenes such as PARTY mode and WELCOME mode.

The second was the different kinds of switches, LCD panels and key-press panels, in each room which the host could easily operate. For example, the three-button switch in the living room could be used to turn off the equipment in every room.

Brazil Villa

This project is proudly done using our equipment
