

# Project Case Study

**HDL**®

Dunkers Kulturhus is Helsingborg's unique centre for the arts. It is housed in a prize-winning new building on the waterfront of one of Sweden's most historic cities. The range of activities at Dunkers is unique, even for an arts centre: museum displays, contemporary art exhibitions, theatre, ballet & modern dance, jazz, chamber concerts and world music gigs all under the same roof. Not forgetting the local school of music and the arts, a recording studio, reference room, bar & restaurant – and a living room just to relax in. A true meeting place for all ages and all interests.

The theatre now provides a venue for more than just performing arts; with its uses expanding rapidly the entertainment complex required a new system for controlling and managing its massive lighting system. The solution was delivered by SmartHome HDL using an energy efficient and intelligent management system.

SmartHome HDL worked to upgrade the existing lighting control system and lighting fixtures, installing new lighting systems for better and more energy efficient lights. This involved the incorporation of existing key-operated manual buttons distributed throughout the facility, along with the existing light-level sensors to control all external lighting.
