

Project Case Study

In a high-tech house in Riccarton, Christchurch, there are no dangling electrical leads and no unnecessary light switches; every practicality has been accommodated with style.

Smart Touch Limited was involved in the automation of this home with features including: lighting controls, Nuvo multiroom audio control via DLP and touch screen (with metadata from iPod), 2 zoned ducted heat pump control, sensor lighting with dimming for late at night, and automated control of the drop down screen and gas fire in the media room.

The home also includes security functions such as enabling the lower level alarm and panic button via the DLP in the master bedroom, and alarm integration (arm alarm, automation system shuts down the house; disarm alarm, welcome lights automatically switch on).

Smart Touch Limited has provided the home owner with a cost effective, energy efficient control system to automate their modern home.
