

Project Case Study

HDL[®]

The Ocean Spring Hotel indoor and outdoor lighting system makes the exterior and interiors of the hotel which gives a fascinating view with all the colours and gives a comfortable mood in the rooms and public areas.

A smart lighting system has been installed with a user interface for individually selecting up to 144 different colour combinations. This is done by scrolling through 12 different predetermined colours using a pair of buttons on the panel - one for the high-level LEDs and one for the low-level. Also available from the panel are a number of static and dynamic preset scenes aimed at providing the ideal environment for everyday living, whatever the mood.

Dimmable pure white LED spotlights and RGB LED strips at ceiling height and ground level provide a wash of colour on the pure white walls.

Ocean Spring Hotel
